Project 09-246B: Accelerated Aging Tests

Mr. Jacobs,

Your test labels applied to paper corrugate have been heat accelerated aged to the parameters of the designed test plan. Inspection of the labels show them to be in excellent condition. There is no visible evidence of loss in adhesion, flagging, tunneling or blistering. There is no yellowing or darkening of the labels.

In my opinion the labels submitted are of excellent quality and durability and well suited for the intended application within record centers. The accelerated age test indicates the labels will be functional for an extended period of time.

If you have any questions regarding the methods employed or results, please let me know.

Best regards,  
Chemsultants, Inc.

Donald L. Eppink  
Senior Chemist  
Physical Testing Laboratory Manager
