

RS-SQL — Records Information On Demand

Few of today's record storage business challenges are new: create value, differentiate yourself, please customers, increase your productivity and grow. However, what is different is the intense pressure to deliver results using less time and money, with little warning and almost no forgiveness for error. Ready to respond to the pace, pressures and fluctuations of an ever-changing record storage management world?

RS-SQL is the state-of-the-art software product from O'Neil first unveiled in 1999. This flexible, feature-rich information management and record tracking software allows you to easily and accurately manage, track and monitor the activity of any storable item (boxes, file folders, documents, tapes) throughout your record center, from deposit to destruction, work order to invoice. Using RS-SQL lightens the load on your internal staff and reduces the time and effort it takes to access information. Today, RS-SQL continues to set the industry standard in record storage management solutions.

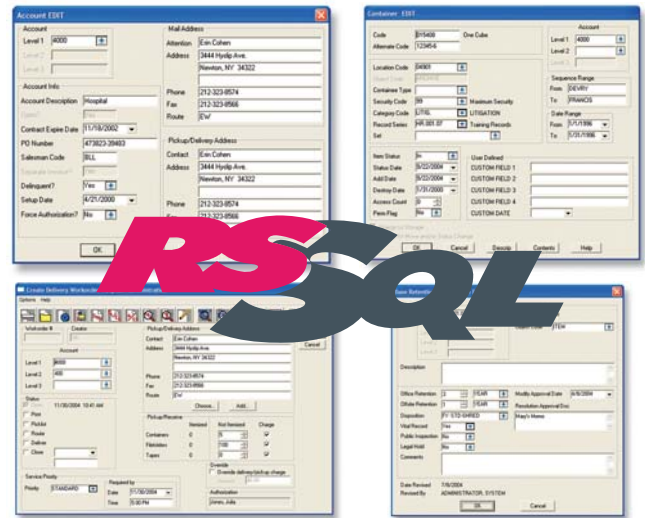

Designed to handle the needs of everyone, from start-ups to multi-facility record centers and built around Microsoft's SQL Server database engine, RS-SQL is both scalable and robust. As the number of users increase, the product automatically scales to meet your needs. Our system can accommodate any size business, small or large.

RS-SQL is Accurate

It means finding what you need, when you need it, guaranteeing 100% service accuracy and efficiency to your customers. Ensuring correct billing and charging for every service you've performed. Having meaningful data at your fingertips and most importantly, total peace of mind. Never underestimate the unparalleled levels of accuracy that RS-SQL brings to you and your customers.

RS-SQL is Flexible

RS-SQL has the flexibility and power to handle the most complex record center business processes and multiple business applications. You can search in the RS-SQL database under virtually any criteria to find information. The combination of query logic and table technology puts your information at your fingertips. You can sort, format, print, export or even email tables. In minutes, you can answer any of your customers' questions or requests about their information and provide data the way they want to see it.

RS-SQL is Consistent

Utilizing the standard Microsoft® Windows user interface, information is displayed in a tabular view, known as a grid. Grids are used in virtually all areas of RS-SQL, creating a window where you can view and change data easily. They are fully customizable with a set of data, sorted and displayed in whatever order is needed, searched from, added to, deleted from, printed and even exported out of RS-SQL. Edits and deletes can be performed on individual items, or globally on groups of selected items. Pull-down menus are listed across the top of grids, buttons are located at the bottom and dialog boxes appear as needed. Grids can be configured for individual users to show the fields and order in which they are wanted, as well as hide menu items and buttons on a per user basis.

RS-SQL Delivers Results

More than just a piece of software, your organization needs a powerful workflow tool that delivers results before value can be realized. By streamlining and automating critical record center management processes, RS-SQL allows you to optimize your operations and improve your ability to make fast and accurate decisions while:

- Speeding the pace of your operations
- Reducing operational costs while boosting the productivity of existing staff
- Decreasing decision cycle time
- Streamlining how content is shared and accessed throughout your organization
- Bringing accuracy, systematic control, consistency and standardization to your business processes
- Minimizing the likelihood of litigation losses resulting from lost documents.

Point-To-Point Tracking With RSMobile®

Combine the RS-SQL work order with O'Neil's portable computing and barcoding and you have complete point-to-point tracking of any item in your record center, through all stages of the delivery and pickup process. The scanner's software (O'Neil's RSMobile) captures the date, time and user, giving you and your customer complete control of this information. It also is extremely valuable for performance reporting, allowing Operations and customers alike to see if a box, file folder or tape was pulled from the shelf, delivered to the customer, picked up, placed in a holding area or re-filed back to a shelf.

Add O'Neil's microFlash® 2t Cabled or Wireless Printer, coupled with Motorola's range of scanners and you can print detailed, time-stamped receipts for customers right on the spot, at the point of activity.

Most Customized, Flexible Pricing and Invoicing in the Industry

The success of your system set-up is measured by the accuracy of your invoices.

As you fulfill services requested by your customer, RS-SQL automatically captures each service that is performed and it appears on your invoice. Pricing can be standardized or customized for customers, departments or even cost centers within the same account; flat rates or quantity price breaks can be established; and you can bill storage by the item or cubic foot.

Multiple formats (from basic one-page invoices to detailed multi-page listings) are available from a service or work order level, showing complete detail. At the end of the month, simply run your invoices and RS-SQL does the rest. Once invoices are complete, export your invoice data into simple accounting software packages, such as Peachtree® or Quickbooks®, or use our Extended Financial Export feature to export your invoice detail into high-end accounting systems.

Everything You Need to Run Your Record Center

Invoicing, scheduling, automatic monitoring and reporting, error trapping, complete search capabilities, wireless technology, portable computing, remote access, remote employee and customer features, retention scheduling, language translation and multi-site functionality are just a few of the key features of RS-SQL, designed to increase your record center's efficiency, productivity and profitability.

About O'Neil Software

Scan. Store. Manage. Deliver.™ Committed to leading the industry for over 25 years, O'Neil has been the software and hardware **solutioneers™** for over 850 record centers in more than 60 countries, ranging from start-ups to multi-nationals.

O'Neil's solutions manage/track multiple types of data including traditional storage boxes, file folders, documents and tapes; from deposit to destruction, work order to invoice. We're also known as the industry pioneers for barcode tracking, portable printers, laser scanners, wireless handhelds and web technology. O'Neil's products consistently offer enhancements and new features that improve ease of use not found anywhere else. Our flagship product, RS-SQL, is the most competitively-priced software solution on the market, ensuring record center productivity and profitability.

O'Neil's RSMobile software was the recipient of the 2005 Symbol® (now Motorola) Enterprise Mobility Solutions Award for the North American Region. Additionally, our company is Microsoft Gold and AT&T® Certified.

Regional coverage includes the Americas, Europe, India/Middle East and Australia. You can learn more about O'Neil Software by visiting our website at www.oneilsoft.com.
