

RS-SQL 3.0 — The Power of Information at Your Fingertips!

NOTE: This data sheet is not intended to replace the RS-SQL 3.0 Official Release Notes, but rather to identify some of the more significant changes to the software. It is critical that you thoroughly read the RS-SQL 3.0 Release Notes before proceeding with your upgrade.

Preliminary Steps Before Upgrading

To ensure a smooth and successful transition to Version 3.0, the following are just some of the significant steps that will need to be accomplished:

- Upgrade any Windows NT Operating Systems running RSWeb® to Windows 2000 or Windows XP.
- Install Adobe Acrobat Reader Version 5.0 or Above
- Upgrade all RSMobile® Hand-Helds to the Windows Mobile 2003 Operating System.
- With this new release, RSWIN.INI configuration settings will now be read from the RS-SQL database, to prevent you from accidentally deleting any files and enhancing security. To ensure that the settings were saved properly to the database, use the RS-SQL Administration program.
- RSWEB.INI configuration settings will now also be read from the database. However, if you are upgrading from a version lower than 2.08, the upgrade program **WILL NOT** transfer the settings in the RSWEB.INI file to the database. As a result, after upgrading you will need to reconfigure the settings using the RS-SQL Administration program.
- Backup your database before and after upgrading.
- Install Macromedia Flash Player on all RSWeb Client PCs.
- Install the latest SQL Server Service Pack, as outlined in the RS-SQL Installation CD.
- If upgrading from Version 2.01 or 2.02, check release notes for important information relating to RSMobile Comm Sessions, Document Activity and Item Alias Queries.
- Contact Technical Support if you are currently using custom software developed by O'Neil. The software shipped on the RS-SQL CD for this new release contains **ONLY STANDARD** RS-SQL software. **DO NOT** install if you are currently using custom software.

Technical Support is always available to answer any questions you may have, or assist you in performing any of these preliminary steps.

Company Code	Code	Item Status	Status Date	Alternate Code	Account Code	Location Code	Add Date	Account Count	Print Flag

RS-SQL Interface Highlights

Enhanced Authorized Lists.

Two new fields have been added to Authorized Lists to make them more useable. Firstly, an authorized user can now be made inactive and secondly, notes can be attached to a specific authorized user. This is great for enforcing agreements such as "This User is Not Authorized For Destruction Workorders."

Search Those Workorder Notes.

We know you type a lot of information into workorder notes and, in previous versions, its not been possible to search for information in the notes. Now you can query the notes from the Workorder grid, and see all the workorders that match the search criteria.

A Set of New Icons.

A popular request has been to change the look of RS-SQL to reflect a more up-to-date interface. In the past, we have avoided this due to the importance of legacy training but the time has now come. In this version, we have updated the icons on each screen to a more modern look, while retaining the same graphic message.

Count those RSMobile Downloads.

The Communications grid now has an option to run a count on the number of transactions that took place during an RSMobile session. You can quickly see how many adds, re-files and inventories took place on each RSMobile device. Simply select the new fields available in the RSMobile Comm Session grid.

Barcode Auto-Incrementing for the Web.

To compliment the new release of RSWeb.NET and its ability to allow customers to add new items, eliminating the transmittal sheet, barcode auto-incrementing has been added. This way your customer can add "phantom" barcodes to items such as filefolders in containers.

RS-SQL is SQL Server 2005 Compatible.

In line with our goal to keep moving your business forward, RS-SQL is fully compatible with the latest version of Microsoft® SQL Server 2005.

New Re-File List to RSMobile Menu Options.

The Re-File List to RSMobile menu option, that was previously only available in the Items grid, is now available in the Container, Filefolder, and Tape grids. You can now send a re-file list to RSMobile from any of these grids.

RSMobile Interface Highlights

RSMobile Tools Menu has been Split.

There are some great options in the RSMobile Tools menu, but the list was getting a little long. In this version, we have split the options into Standard Tools and Administrative Tools.

Precision Scanning Now Available.

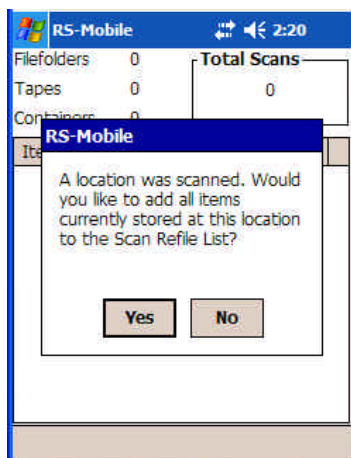

When working close up with filefolders or tapes, accurate scanning can become difficult. The latest RSMobile devices, featuring the imager engine, now provide the ability to switch to a very precise scanning mode. In this mode, the imager will only decode a barcode covered by the cross-hairs, rather than any that appear in the target box.

Choose Your Focus.

The latest RSMobile devices also allow you to change the focus from Near to Far. By default, the focus position is Near and works well for most situations, but some users have found that the Far setting works better. Either way, the choice is now yours.

Single Scan Re-Filing.

The RSMobile feature for re-filing has been updated, so that a single location may be scanned as — an amazing time-saving feature for record center staff.

RSWeb.NET Interface Highlights

Want to give your clients more immediate access to their records? Lighten the records management burden of your customer service staff? Lower your overhead and expenses and set the standards in your market?

O'Neil Software has harnessed the power of the Internet and Microsoft®'s latest .NET technology, to make your record center a true extension of your clients' operations. As part of our complete suite of fully integrated software (RS-SQL® and award-winning RSMobile®), RSWeb.NET provides your clients with fast, flexible and real-time access to all their business information, right when they need it, a mouse click away!

RSWeb.NET has many exciting new features, please see the separate RSWeb.NET Overview Data Sheet (DS002301/06) for further information.

About O'Neil Software

Committed to leading the industry, the name O'Neil Software has become synonymous with **accuracy, flexibility, experience and delivering results** in record storage management. For 25 years, O'Neil has been the software and hardware **solutioneers™** for over 850 record centers in more than 60 countries, ranging from start-ups to multi-nationals.

O'Neil's solutions manage/track multiple types of data including traditional storage boxes, filefolders, documents and tapes; from deposit to destruction, work order to invoice. We're also known as industry pioneers for barcode tracking, portable printers, laser scanners and web technology. O'Neil's products consistently offer automation, enhancements and new features that improve ease of use not found anywhere else. Our flagship product RS-SQL, is the most competitively-priced software solution on the market, ensuring record center productivity and profitability. RSMobile software is the recipient of the 2005 Symbol Enterprise Mobility Solutions Award for the North American Region. O'Neil Software is also a Microsoft Gold Certified Partner.

Regional coverage includes the Americas, Europe, India/Middle East and Australasia.
